

RELEVANCE WITH SDG'S

SDG 3:

Target 3.8 (Universal Health Coverage): This target emphasizes access to quality essential healthcare services and safe, effective medicines for all. A chatbot providing verified Ayurvedic information democratizes access to safe health knowledge, reducing the spread of medical misinformation and helping users make informed choices.

Target 3.B (Research and Access): Grounding the chatbot entirely in *evidence-based* official data promotes the scientific validation of traditional practices, aligning with the goal to support research and access to safe medicines.

WHO Global Traditional Medicine Strategy 2025–2034 explicitly has:

WHO's current Traditional Medicine Strategy emphasizes **evidence, safety, appropriate regulation and integration of traditional medicine into health systems.**

THIS MEANS THAT:

WHO itself identifies evidence, safety and appropriate regulation as important parts of its traditional-medicine strategy

That supports **access to reliable information around traditional medicine and regulation.**

OUR PROJECT GIVES EVIDENCE BASED ANS+CITATIONS+OFFICIAL SOURCES LIST
KARTA HAI TO YE WHO KE GUIDELINES SE BHI MATCH KAR RAHA HAI (A GOOD AND
IMP PART TO BHI NOTED)

SDG 9: STRONG

Humara jo project h uska basic workflow is like:

p.t.o.....

Question

↓

Query understanding

↓

Jurisdiction/domain identification

↓

Retrieval

↓

Retrieval validation

↓

Corrective retrieval if necessary

↓

Evidence-grounded generation

↓

Citations + confidence + escalation

and we are using tech like:

LLM + RAG + Self-RAG + Corrective RAG + source verification + multilingual interface + structured information retrieval

So TARGETS ON WHICH OUR PROJECT FOCUSES IS:

Target 9.5: Intellectual property protection is the legal bedrock of industrial innovation. By automating draft generation and guiding researchers and startups through complex IP processes, you lower the massive friction involved in securing patents and trademarks. This directly supports Target 9.5's goal to enhance scientific research and encourage innovation—creators are much more likely to invent and commercialize when the path to protecting their work is clear and accessible.

Target 9.c: the IP Cost Calculator provides financial transparency, allowing innovators from all economic backgrounds to plan and participate in the industrial economy without being derailed by hidden legal fees.
