

IP SAKT SAHAYAK

Systematic, source-grounded data collection map for the 5 legal / Ayurveda / biodiversity modules

Prepared: 2 September 2026 | Primary objective: identify reliable public sources for model training while clearly separating open/reusable material from restricted or confidential systems.

IMPORTANT: A website being publicly viewable does not automatically mean that unrestricted web scraping, bulk downloading, redistribution or model training is legally permitted. This map therefore separates open/licensed data, public official information with permission/technical limits to verify, and restricted/confidential sources.

Status	Meaning for your AI dataset
GREEN	Strong candidate for machine-readable collection because an open licence, government open-data licence, API/download facility or explicit reuse policy is available. Still retain attribution/provenance.
AMBER	Reliable official/public source, but unrestricted scraping or bulk reuse was not established. Prefer official downloads/APIs and check the current site policy/technical controls.
RED - RESTRICTED	Do not scrape or train on restricted/private/confidential contents. The source may still be extremely important as a reference for system design and legal context.

1. What your training dataset should contain

Module	Best training objects	High-value fields
1. Patentability + TK	Patent records + patent law + public TK metadata + open-domain Ayurveda source texts where licensed	publication no.; title; dates; applicant; IPC/CPC; abstract/claims where licensed; legal status; prior-art links; source text; citation; confidence
2. Biodiversity + ABS	Biodiversity occurrences + species/taxonomy + ABS laws/regulations/FAQs + official ABS guidance	scientific name; taxonomy; occurrence; geography where licensed; dataset/publisher; licence; Act section; approval type; benefit-sharing rule; effective date
3. Drug/Product classification	Official ASU drug definitions/rules + pharmacopoeial/formulary references where reuse is permitted	product name; system; category; dosage form; statutory definition; ingredients; authoritative-book reference; rule/section; source/version
4. Ayurveda-Aahara	FSSAI regulations, gazettes, orders, recipes and schedules	food/product name; category; ingredients; process; permitted/excluded ingredient; labelling/compliance rule; notification date; source document
5. Trademark + GI	Trademark/GI Acts, Rules, journals and official registry records	application no.; mark/GI; class; goods/services; applicant; filing date; status; journal no.; registration date; territory; opposition/event; document link

1. PATENTABILITY & TRADITIONAL KNOWLEDGE

Source	What to extract	Status
India Code Open source Primary legal text / Acts, Rules, sections and subordinate legislation	Patent Act sections; definitions; prior-art provisions; amendments; rules; statutory language.	GREEN/AMBER Public official source. Prefer downloading official documents/API where available; do not assume unrestricted scraping merely because pages are public.
IP India – Patents Open source Indian patent office: acts, rules, public search, status and patent publications	Application number, publication number, title, applicant/patentee, filing/priority/grant dates, classifications, status, citations where exposed, prosecution/publication documents.	AMBER Official public source. Public access is not the same as permission for high-volume scraping; use official search/download mechanisms and respect technical controls.
IP India – Patent resources Open source Patent Rules, manuals, guidelines and regulatory documents	Patent procedure, forms, rules, examination/prosecution concepts, fee/status metadata and regulatory labels.	AMBER Use official downloadable documents. Verify current version before training.
IP India – Patent Act §11A Open source Publication of patent applications	Publication timing and exceptions; useful for building publication-status logic and legal explanations.	AMBER Legal text is public; automated extraction permission should be checked separately.
IP India – Patent Act §13 Open source Prior-art / anticipation search provision	Rules governing examination for anticipation by earlier publication/prior claims; useful for patentability reasoning labels.	AMBER Use as authoritative legal ground truth; do not treat it as a patent dataset.
TKDL Open source Traditional Knowledge Digital Library – restricted database	Use only its public metadata/explanatory material: source systems, role in prior-art examination, access model, non-disclosure safeguards, publicly stated outcomes.	RED – RESTRICTED FULL TKDL DATABASE IS NOT OPEN DATA. Full database access is limited to patent offices under an Access (Non-disclosure) Agreement. DO NOT scrape, bulk-copy, train on restricted TKDL contents, or redistribute confidential records.
TKDL – About Open source Official description of TKDL sources and access restrictions	Open-domain source-book descriptions, systems of medicine covered, TK Resource Classification overview, patent-office access information.	RED/SAFE METADATA ONLY The page explicitly states that full access is under a non-disclosure agreement and that examiners use it for search/examination only.
WIPO – India Patent Judicial Guide Open source Independent authoritative explanation of Indian patent system and TKDL	Contextual/legal background, TKDL role, traditional-knowledge prior art, patent-system explanations.	GREEN FOR RESEARCH / CHECK COPYRIGHT Excellent secondary source for explanations; do not treat prose as public-domain training data without checking reuse terms.
WIPO – PATENTSCOPE Open source International patent publication/search platform	PCT publication metadata and patent documents for research/search; useful for cross-country prior-art examples.	RED FOR SCRAPING WIPO explicitly prohibits automated queries, bulk acquisition/download, bulk copying and web scraping on PATENTSCOPE. Use permitted access/licensing routes instead.
EPO Espacenet Open source Worldwide patent search	Patent publications, bibliographic data, legal-status context and technical prior art across jurisdictions.	AMBER Free search access does not itself mean unrestricted scraping. Prefer EPO bulk/linked-open data products for machine use.
EPO Linked Open EP Data Open source Machine-readable linked patent data	Patent application/publication identifiers, relationships, linked records; useful for building a searchable patent graph.	GREEN/LICENCE-CHECK Designed for machine access; follow EPO data terms and attribution/licensing requirements.
EPO Bulk Data – EP Full Text Open source Machine-readable bulk patent full text	Full text of EP applications/grants in XML/PDF-A; useful for NLP, retrieval and prior-art models.	LICENCE/CONDITIONS Use bulk-data terms rather than scraping Espacenet.

2. BIODIVERSITY & ACCESS AND BENEFIT SHARING (ABS)

Source	What to extract	Status
National Biodiversity Authority (NBA) Open source Official Indian biodiversity/ABS regulator	ABS framework, notifications, guidelines, FAQs, regulatory explanations, classifications, forms and official documents.	AMBER Primary source. Public documents can be collected from official download pages; no blanket scraping permission should be assumed.
NBA – Notifications & Guidelines Open source ABS regulations, guidelines and official notifications	ABS rules, benefit-sharing regulations, exemptions, repository notifications and related official guidance.	AMBER Best source for current regulatory documents; archive versions separately.
NBA – FAQs Open source Official interpretations/explanations	Definitions of biological resources, ABS purpose, benefit claimers, approval concepts and practical regulatory FAQs.	AMBER Good for explanatory QA data; legal conclusions should be grounded in the Act/Rules/Regulations.
India Code – Biological Diversity Act Open source Primary statutory text	Sections 2, 3, 4, 6, 7, NBA powers, approvals, benefit-sharing provisions and related rules.	GREEN/AMBER Primary legal source; store section number and document version/date with every training record.
NBA ABS e-filing Open source Official ABS application portal	Application workflow, form names, procedural instructions and portal guidance; not a general open dataset.	RED/RESTRICTED Do not scrape applicant accounts, uploaded documents, credentials, personal data or non-public application information.
BIOMIS / National Biodiversity Portal – ABS Open source Biodiversity and ABS educational information	ABS concepts, provider/user/PIC/MAT explanations and biodiversity information.	AMBER Useful for explanatory content; check dataset-level terms before bulk extraction.
GBIF Open source Global biodiversity occurrence data with machine-readable licensing	Species occurrences, scientific names, taxonomy, locations where licensed, observations, datasets and publisher metadata.	GREEN – LICENSED DATA Prefer API/downloads. Each dataset/record carries licensing information; CC0/CC BY are generally easiest for model training, while CC BY-NC restricts commercial use. Preserve attribution.
GBIF Data User Agreement Open source Reuse and attribution rules	License/attribution requirements and API-use constraints for GBIF-mediated data.	GREEN WITH CONDITIONS Do not merge records and discard license/provenance fields. Retain publisher identifiers and citations.

3. DRUG & PRODUCT CLASSIFICATION

Source	What to extract	Status
CDSCO – Traditional Drugs Open source Official Drugs & Cosmetics Act definitions for ASU drugs	Definitions of Ayurvedic/Siddha/Unani drugs, statutory categories and regulatory terminology.	AMBER Primary regulatory source. Use official documents/pages; do not infer that all content is scrape-licensed.
Drugs & Cosmetics Rules, 1945 Open source Official rules for ASU drugs and licensing	Drug categories, licensing conditions, patent/proprietary medicine concepts, forms and requirements.	AMBER Download official PDF and retain version/date. Useful for classification labels.
Ministry of AYUSH / PCIM&H; Open source Authoritative Indian medicine pharmacopoeial/formulary ecosystem	Ayurvedic formulations, monographs, pharmacopoeial/formulary references, nomenclature and quality-control context.	LICENCE-CHECK Use official publications where reuse rights permit. Do not assume every book/PDF is public domain simply because it is government-hosted.

4. AYURVEDA-AAHARA

Source	What to extract	Status
FSSAI – Regulations Open source Official Food Safety regulations	Ayurveda Aahara Regulations 2022 and amendments/orders; definitions, ingredients, permitted categories, labelling and compliance requirements.	GREEN FOR REPRODUCTION POLICY / CHECK THIRD PARTY FSSAI copyright policy permits reproduction of site material subject to accuracy/source acknowledgement, but excludes third-party copyrighted material. This is not the same as unlimited scraping permission.
FSSAI – Ayurveda Aahara Gazette Open source Original 2022 gazette notification	Definition of Ayurveda Aahara, scope/exclusions, Schedule A authoritative Ayurveda books, permitted ingredients/process concepts and requirements.	GREEN/AMBER Primary regulatory document. Store notification date and document hash/version.
FSSAI – Advisories/Orders Open source Current directions and recipe-related updates	Post-2022 implementation directions, Ayurveda Aahara recipes and later regulatory updates.	AMBER Important for keeping the model current; archive historical versions rather than overwriting them.
FSSAI – Website Policies Open source Official reuse/copyright policy	Rules governing reproduction of FSSAI site material and third-party material.	GREEN WITH CONDITIONS Material may be reproduced free of charge if accurate and source is acknowledged, except third-party copyrighted material. Confirm any automated-access restrictions separately.

5. TRADEMARK & GEOGRAPHICAL INDICATION (GI)

Source	What to extract	Status
IP India – Trade Marks Act Open source Primary Indian trademark law	Definitions, registration, refusal grounds, infringement, opposition, renewal and statutory framework.	AMBER Use official Act/rules as legal ground truth.
IP India – Trade Marks Rules Open source Procedural rules	Forms, procedures, classifications, fees, opposition/registration processes and administrative rules.	AMBER Prefer official downloadable PDFs.
IP India – Trademark Journal Open source Published trademark journal records	Journal number/date, classes and published marks/notices; useful for historical trademark-event training.	AMBER Public publication source; do not assume unrestricted bulk scraping.
IP India – Trade Mark Public Search Open source Official trademark search interface	Searchable mark/application details and classification-related information exposed by the public search system.	AMBER/TECHNICAL-CONTROLS Use normal public-search access and respect OTP/CAPTCHA/rate limits. Do not bypass technical controls or scrape protected interfaces.
IP India – GI Act Open source Primary GI law	Definitions, registration/protection, infringement, authorized users and statutory framework.	AMBER Official legal ground truth.
IP India – GI Rules Open source GI procedural rules	Application, opposition, registration and procedural requirements.	AMBER Current page includes 2025 amendment rules; version/date should be stored.
IP India – GI Public Search Open source Official GI registry search	GI application number, GI name, applicant, status, filing date, class, goods, geographical area, journal number and document links.	AMBER Excellent structured source for GI records. Respect site technical controls; prefer official exports/downloads where available.
IP India – GI Journal / Registry Open source Registered GI and journal publications	Registered GI list, authorized users, journal publications, application and registration documents.	AMBER Use official registry/journal publications and retain document provenance.

CROSS-CUTTING OPEN DATA

Source	What to extract	Status
data.gov.in – Open Government Data Open source Indian government open-data portal	Patent application/grant datasets, government datasets, catalog metadata and APIs. Patent catalog includes weekly published/granted patent resources.	GREEN – OPEN GOVERNMENT DATA Datasets/resources are licensed under the Government Open Data License – India. Use the dataset's stated license/metadata and API/download facilities rather than blind scraping.
data.gov.in – Patent Application Open source Specific patent dataset/catalog	Weekly patent applications published and granted; fields can include application/publication information depending on resource.	GREEN – LICENSED DATA Strong candidate for structured model training because the portal exposes downloads/APIs and states its open-data licensing framework.

6. THE TKDL RULE — DO NOT MISS THIS

The Traditional Knowledge Digital Library (TKDL) must remain in your source map even though its full database is not open for general reuse. It is highly relevant to the Patentability + Traditional Knowledge module.

TKDL's own site states that the full database is available to patent offices under a TKDL Access (Non-disclosure) Agreement. It also states that patent examiners may use it for search/examination and that contents cannot be disclosed to third parties except where necessary for citation. The terms document likewise states that users must use TKDL for patent search/examination and must not disclose TKDL contents to third parties.

Official TKDL home: [TKDL](#)

Official TKDL About: [About TKDL](#)

Official access terms: [TKDL non-disclosure terms](#)

Therefore for your model:

- DO use: TKDL's public explanatory pages, publicly stated statistics/outcomes, source-system descriptions, access model and its role in prior-art searching.
- DO NOT use: bulk TKDL database records, confidential entries, restricted formulations/practices obtained through the examiner-access system, or copied TKDL content supplied under the NDA.
- DO NOT scrape: the restricted TKDL database or attempt to bypass its access controls.
- Better training strategy: reconstruct a lawful prior-art corpus from the underlying open-domain authoritative Ayurveda/Siddha/Unani/Yoga source books where the particular edition/text is actually reusable, and link those records to public patent publications.

7. Recommended legal-safe dataset architecture

Layer	Store	Example
A. Raw source	Original URL/document + retrieval date + SHA-256/hash	FSSAI Gazette PDF, India Code Act page, GI Journal PDF
B. Provenance	Publisher, licence, source type, version/effective date	Government Open Data License – India; CC BY; official gazette
C. Structured record	JSON/Parquet rows	patent_number, title, class, status, source_url
D. Legal grounding	Act/section/regulation citation	Patents Act §13; BD Act §6; FSSAI Ayurveda-Aahara Regulation X
E. Retrieval evidence	Document/page/section anchor	PDF page, section number, journal number
F. Training label	Task-specific label	patent_prior_art=true; product_class=Ayurveda_Aahara

8. Priority order — what I would collect first

P0 – Start immediately — data.gov.in patent resources; India Code Acts/Rules; FSSAI Ayurveda-Aahara Regulations + orders; IP India GI registry/journals; IP India trademark/patent official publications.

P1 – Build biodiversity layer — NBA Acts/Rules/ABS regulations/guidelines + GBIF licensed biodiversity data. Preserve dataset-level licences and publisher IDs.

P2 – Add technical patent corpus — EPO Linked Open Data and permitted EPO bulk data. Use these instead of scraping Espacenet/PATENTSCOPE.

P3 – Ayurveda knowledge layer — Only open/reusable authoritative Ayurveda texts or editions whose copyright/licence status has been verified. Keep the exact edition and source.

P4 – Restricted-reference layer — TKDL public metadata and explanatory material only. Keep a separate flag saying restricted full corpus is unavailable for model training.

9. Critical compliance checklist before training

- ☐ Record the exact source URL and retrieval date for every record.
- ☐ Store licence/copyright status as a field; never discard it during preprocessing.

- ☐ Keep government legal texts separate from explanatory articles/blogs and secondary commentary.
- ☐ For CC BY / similar licensed data, preserve attribution and licence information.
- ☐ For CC BY-NC data, do not assume it is suitable for a commercial deployment; obtain legal review if the project could be commercial.
- ☐ Do not bypass CAPTCHA, OTP, login, rate limits, robots restrictions, paywalls or other access controls.
- ☐ Do not scrape private application portals or personal information.
- ☐ For TKDL, do not scrape or train on the restricted database.
- ☐ When a government website hosts third-party copyrighted material, treat that material separately from government-authored material.
- ☐ For changing laws/regulations, version records by effective date and document date; do not overwrite historical rules.

10. Source verification notes used for this map

The source map was checked against current official webpages/search results on 2 September 2026. Particularly important confirmations include: IP India's current patent/trademark/GI resource pages; FSSAI's current Ayurveda-Aahara regulations page and current orders; NBA's current ABS notification/guideline pages and FAQs; TKDL's official access/non-disclosure statements; data.gov.in's Government Open Data licensing statement; GBIF's data-use/licensing terms; and EPO's current linked-open/bulk-data documentation.

Not legal advice: This PDF is a data-engineering/source-selection guide, not a legal opinion. For a production/commercial model, have counsel review the exact licences, copyright status of source editions, database rights, terms of service, and intended model use.

CASE STUDY — 1. Neem–Turmeric Skin Cream Claimed as a Cure

User scenario: A manufacturer wants to label a Neem–Turmeric skin cream as a “cure” for a skin disease.

Why the existing source map was lagging / incomplete for this case

The original source map already covered ASU/drug classification through CDSCO, the Drugs & Cosmetics Rules, and Ministry of AYUSH/PCIM&H.; However, this scenario is not only a product-classification question. The phrase “**cure for skin disease**” introduces a separate **claims/advertising** question, while a skin cream may also fall within the **cosmetics** framework depending on its intended purpose and claims. The existing map therefore did not contain enough dedicated material to connect: **product type** → **therapeutic claim** → **advertising restrictions** → **labelling/compliance consequence**.

Key gap: the original map listed “Drug/Product classification” sources, but did not separately map the Cosmetics Rules and the Drugs and Magic Remedies (Objectionable Advertisements) Act to this specific therapeutic-claim scenario. The additional sources below close that gap.

What the additional authoritative sources add

Resource	Why it is needed for Case 1
CDSCO — Cosmetics Rules, 2020	Provides the dedicated cosmetics framework. Rule 36 states that a cosmetic may not purport or claim to convey an idea that is false or misleading to the intending user.
CDSCO — About Cosmetics	Explains the statutory cosmetic definition and the regulatory/licensing framework. It is useful for the first classification step before assessing the claim.
Drugs & Cosmetics Act, 1940 — CDSCO	Provides the primary statutory framework and definitions relevant to drugs/cosmetics. Use the current official version and retain section-level provenance.
Drugs and Magic Remedies (Objectionable Advertisements) Act, 1954 — India Code	Critical for the “cure” claim. Section 4 prohibits misleading advertisements relating to drugs, including false claims; Section 3 addresses specified disease-treatment advertisements.
Ministry of AYUSH advisory on misleading advertisements	Useful where the product is an ASU&H; drug: the Ministry states that provisions on advertisement of AYUSH drugs are prescribed under the Drugs and Magic Remedies Act and warns against misleading claims/advertisements.
Ayush Suraksha — Objectionable/Misleading Advertisement reporting	Useful as a current AYUSH enforcement/reporting reference for objectionable or misleading advertisements involving ASU&H; products.

Recommended AI decision path for this case

- **1. Identify the product and intended use.** Is the cream presented for cleansing/beautifying/appearance, or is it presented as a product intended to treat/cure a disease?
- **2. Classify before answering.** Use the Drugs & Cosmetics Act/Cosmetics Rules and the applicable AYUSH/ASU&H; framework where relevant. Do not assume “herbal” automatically means “Ayurvedic drug” or “cosmetic.”
- **3. Detect the claim.** Flag words such as “cure,” “treat,” “prevent,” or disease-specific therapeutic claims for a dedicated advertising/claims check.
- **4. Check advertising restrictions.** Retrieve the relevant provisions of the Drugs and Magic Remedies Act and applicable AYUSH guidance. The model should distinguish between a product classification result and an advertising-claim result.
- **5. Produce an evidence-grounded response.** Return the applicable rule/section, source document, date/version, and a short explanation rather than an unsupported yes/no legal conclusion.
